What is AgelessBlend?

AgelessBlend skin care technology enables textile manufacturers to enhance their textiles with a variety of active ingredients that protect against skin ageing caused by free radicals in our body. The technology nourishes our body's natural defence mechanism (which decreases as we age) against free radicals and therefore has an anti-ageing effect.

Free Radicals

A free radical is an atom or group of atoms that has an unpaired electron and is therefore unstable and highly reactive. Free radicals will steal an electron from a neighbouring molecule to stabilise itself. When it succeeds, its victim will turn into the free radical itself. This causes excess free radicals and increases the speed of the skin ageing process.

Antioxidants

Antioxidants are our body's natural defence mechanism against free radicals. They render free radicals harmless by donating electrons and prevent damage to DNA. Unfortunately, as we age, this mechanism becomes less efficient.

How it works?

In this technology; textiles come into contact with our skin and nourish our skin. Ingredients such as Ubiquinol as well as advanced CoQ10 are absorbed by our skin and transported all over our body where they can disarm free radicals and boost other antioxidants. Our skin is the largest organ in our body, so it is an ideal means of transport for such revitalising solutions.

Active ingredients: Rooibos, Green Tea, Sea Kelp, Aloe vera, Vitamin E, Ubiquinol and Thyme oil.

ADVANTAGES

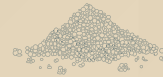

Wash-resistant

Long life

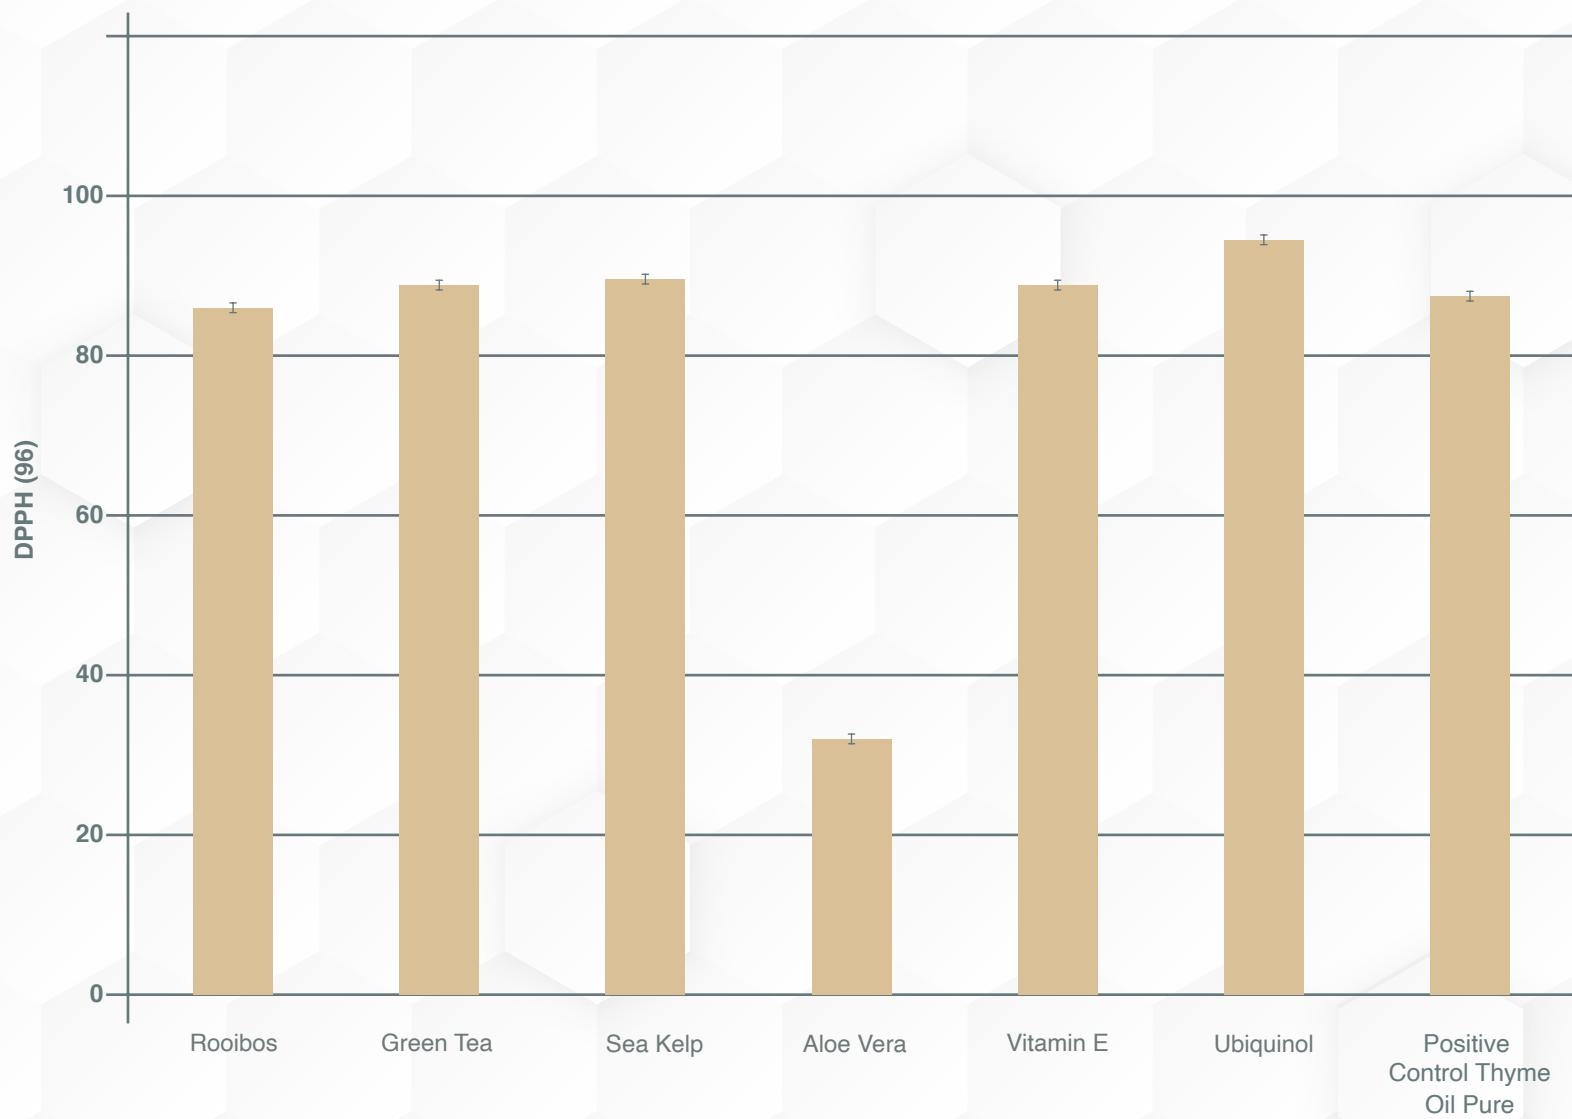

Granulate release

**Environment and
skin friendly**

The background of the entire image is a repeating pattern of light beige hexagons, creating a honeycomb texture.
