What Is BIOCIDAL TECHNOLOGY?

Similar to the definition of biocidal product, biocidal function is the function of creating a controlling effect on any harmful organism from a chemical or biological point of view or restricting its movement, removing it, making it harmless, destroying it.

Therefore, a processed article with a biocidal function is an article that has at least one of the functions of having a controlling effect on any harmful organism from a chemical or biological point of view or restricting its movement, removing, rendering harmless, destroying it. The purpose of this function is not to protect the article itself or its original function, but to provide an additional biocidal function.

Harmless to human
and animal health.

It has non-oscillating
silver technology.

WHAT IS MICROVRS?

MICRO VRS destroys
the virus in seconds
and provides a long-
lasting hygiene
environment on the
bed mattress ticking.

Approved by
accredited
organisations.

Acts on a wide
spectrum of viruses.

Sustainable and
environmentally
friendly.

Offers superior
protection against
diseases.

FEATURES

- Does not interact with the skin dermatological tests has passed
