Working Principle?

Our body loses moisture from time to time due to environmental and biological reasons. In such cases, external supports are needed in order to restore the moisture lost by our body and increase the elasticity of our skin. TenderSilk bedding fabric evokes a feeling of renewal and rejuvenation on our skin, thanks to the natural extracts from Silk used in its production.

Features of TenderSilk Mattress Fabric?

- Preserving the flexibility of the upper layer of the skin (Epiderm),
- Regeneration of the dry and sensitive skin after stress,
- Increasing the water capacity of the skin thanks to the high hydroxy amino acid in its structure,
- Preventing hair wear during sleep thanks to the keratin in its structure,
- Ensuring the glow of the skin thanks to the amino acids in its structure.

Test Result

Moisture Retention Index			
Seample	Before	After	Improvement
Control Fabric	5	4	+1
5% Silk Protein Applied Fabric	5	2	+3

* Moisture retention index: The condition of the skin surface is evaluated on an 8-step scale

- According to the test results, it was observed that TenderSilk mattress fabric with silk protein applied increased the moisture retention index
